IDENTIFIERS	*Florida

ABSTRACT

This report was designed to provide information on the progress of students who had transferred from one of the 28 public community colleges in Florida and who were enrolled in one of the nine universities of the Florida State University System (SUS) for at least one quarter hour of credit in fall 1974. All data were taken from SUS files. Summary information is presented in tabular form with minimum comment. Data are broken down by (1) sex and university, (2) race and university, (3) age and university, (4) date of entry into the university, (5) quarter hours of credit transferred by the university, (6) cumulative quarter hours of credit earned toward the degree, (7) county of residence and university, (8) community college of origin and university, (9) cumulative grade point average (GPA) earned at the university, and (10) college major and university. Also included are a table illustrating a comparison of the fall 1974 GPA attained at the university by those transferring prior to earning 90 quarter hours and those transferring after earning 90 quarter hours or more, and a table showing the mean cumulative GPA attained at the university by community college of origin and university. INTRODUCTION

A function of Florida's public community colleges is to provide curricula through which students prepare themselves for entry into upper division instructional programs of their choice. Consequently, the community colleges and the Division of Community Colleges are concerned about the academic progress of those students transferring to the state universities of Florida.

The Articulation Agreement (1971) between the Division of Community Colleges and the Division of Universities provides for the encouragement of research conducted cooperatively by the two divisions. The following report is the result of such a research project designed to provide information on the progress of transfer students. This study would not have been possible without the full support and cooperation of the Board of Regents and the nine universities in the State University System.

In 1973, the Division of Community Colleges, Florida State Department of Education published Articulation 1973. This was a report of a comprehensive study of students enrolled in the universities of the Florida State University System (SUS) who had also previously attended Florida community colleges. The data base for the 1973 study included undergraduate students enrolled in the SUS, except FAMU, during the Fall of 1971.

In 1975, Articulation was again published using data on undergraduate students enrolled in the SUS in the Fall of 1973, again excluding FAMU since that university's data base was not complete. However, a separate section was prepared by FAMU and included in that report.

The present report uses data on undergraduate students enrolled in the SUS in the Fall of 1974. All data were taken from the SUS Student Data Course File which now includes all state universities.

The present report is much briefer than previous reports for several reasons. The 1973 publication included a review of literature which was subsequently discontinued. Both the 1973 and 1974 publications included separate discussions on post baccalaureate students. Since most such students who transferred from a community college to a university baccalaureate program and then continued either at that university or another one in a post baccalaureate program are not identifiable, it was decided not to present summary data on the few that could be isolated.

Previous reports discussed various possible explanations of results noted in tables. It is thought by the Division that since so many explanations are only speculative that the reader should form his own such conclusions directly from the summary data. Insofar as hypothesis testing is concerned, there are too many possibilities to include. For example in Table 12.1, one may be interested in testing for a significant difference between mean GPA by Brevard Community College's transfers at any two universities or total SUS yielding 28 possible comparisons. Another difference of interest would be that between Brevard's students at a given university and each of the other college's students at that university yielding another 224 comparisons. Obviously to proceed along these lines here for all community colleges would be impractical.

Summary information is presented with minimum comment. Footnotes and comments following tables are presented in order to explain contents of tables and to suggest ways in which to use the results or to avoid misuse. Again, it is not the purpose of this report to test hypotheses. However, when feasable, adequate information is presented for the reader to make statistical comparisons.

Insofar as possible, each table from previous reports has been updated and the original table numbers have been retained in order to facilitate com-

parisons over time. For example, Table 2 is a replication of Table 2 from previous years and Table 11.1 is a replication of Table 11 from previous years whereas Table 11.2 expands upon Table 11.1. Table 7 in previous reports classified transfer students according to class status such as freshman, sophomore, junior, senior, etc. Data were not available for the present report to adequately classify students in this way. Therefore, in order to retain table numbers from previous years, this report contains no Table 7.

In this report, a community college transfer student is defined as one who is enrolled at one of the nine state universities for at least one quarter hour of credit and whose college of last attendance was a Florida public community college. Some of these students are reverse transfers, i.e., they attended a university, transferred to a community college, and then back to a university. Such students are not readily identifiable.

Florida's twenty-eight public community colleges are listed on the inside of the back cover. The nine public universities are the University of Florida (UF), The Florida State University (FSU), Florida Agricultural and Mechanical University (FAMU), the University of South Florida (USF), Florida Atlantic University (FAU), Florida Technological University (FTU), the University of West Florida (UWF), Florida International University (FIU), and the University of North Florida (UNF).

Table 1 classifies students by university and sex. Results from previous years is included for this table in order to note the increase in the number of transfer students. However, the 1973 data included 611 graduate students and 3074 students whose class standing was undetermined. The 1971 data included 712 graduate students and 7 unclassified students.

Table 2 classifies students by university and race and Table 3 classifies them by university and age.

Table 4.1 indicates the first time a student enrolled in a given university and reveals the entire time span encountered in the data, 1952 through 1974. However only 1106 (4.1%) of these students had entered the SUS prior to 1972. Another 2976 (11.1%) entered in 1972 and 8762 (32.5%) in 1973. The largest group, 14,040 (52.2%), entered the SUS during 1974. If one could assume that the "typical" transfer student completes upper division work in approximately two years, then 22,802 (84.8%) of these transfer students appear to be making "typical" progress. Notable exceptions, not revealed in the data, would include the student who starts out in a university, transfers to a community college, and then transfers back to the university. His original entry date to the university would remain on record. Table 4.2 presents the same data as Table 4.1 in more detail.

The left-most column in Table 5 represents the total number of quarter hours (semester hours x 3/2) transferred into the university from institutions previously attended. It cannot be determined which of these credits came from institutions other than community colleges.

It is interesting to note the number of students attending upper division universities (FAU, UWF, FIU, UNF) who transferred with fewer than 90 quarter hours, the usual minimum requirement for junior or third year status. It was at first thought that transfer hours shown by the upper division universities did not include lower division work, but checking with the universities indicated this was not the situation. Students who have completed community college general education requirements and are very near completion of the AA degree are often admitted by the upper division universities as are a number of special students and dually enrolled students. CLEP credit earned at the community college is not necessarily posted as hours transferred. Those showing zero hours of transfer credits at all the universities are in most cases students whose transcripts were not yet evaluated at the time the data tape was completed. There is always, of course, the possibility of error in the data. For these reasons, subtotals and percents are based on students showing more than zero hours transferred.

The majority of students, 20,412 (82.4%) transferred in from 75 to 119 quarter hours.

Table 6 shows the total number of quarter hours earned toward the student's degree. Apparent error exists in the data because the frequencies of those earning zero hours and of those who could not be classified (blanks) are so high. Again, subtotals and percents are based on data other than zero hours earned or blank data.

A student is classified in Table 8 according to the university being attended and the county he claims as home. The N column is a frequency and the % column is a column percent.

Table 9.1 identifies the transfer student according to the community college attended just prior to first entering the university. One, therefore, cannot further identify the reverse transfer student nor the student who attends perhaps several community colleges before going on to the university.

The rate at which community college students transfer to the SUS seems to be consistent across colleges. That is, if one looks at the advances and professional (university parallel) enrollment in a particular college as a percent of the total advanced and professional enrollment, these percents are very nearly the same as those in the SUS column of Table 9.1. Enrollment data in the community colleges can be found in Report for Public Community Colleges, an annual report prepared by the Division of Community Colleges.

Table 9.2 presents the same data as Table 9.1 except that all percents are column percents in Table 9.1 and row percents in Table 9.2. Thus, the former table describes the distribution of students within a particular university and the latter describes the distribution of students which came from a particular community college.

Table 10 is a summary of cumulative GPA earned at the university. GPA is calculated by dividing grade points earned at the institution (based on a 4.0 system) by total credit hours attempted at the university. For 230 students, grade points earned had the value zero and total hours earned had a non-zero value indicating that their zero GPA is probably valid. For 1023 students, total credit hours attempted had the erroneous value zero thus making calculation impossible. No GPA is reported for students at FAMU because data were unavailable and none is reported for students at FIU because that university did not report grades in the traditional manner.

Table 11.1 attempts to provide summary data to enable one to compare success in the SUS of a group of students completing community college preparatory work before transferring with that group that transfers earlier in their academic careers. Since some students complete requirements for the AA degree, but choose not to formally receive the degree, it may be safe to assume that those who complete 90 quarter hours were essentially the group completing the AA degree.

It is observed that in most cases mean cumulative GPA earned at the university is higher for the group transferring after earning 90 quarter hours at the community college. Standard deviations are provided in Table 11.2 for those wishing to make statistical comparisons. Mean GPA for all transfer students is 2.69 with standard deviation .82.

Again, no GPA is reported for students at FAMU because data were unavailable and none is reported for students at FIU because that university did not report grades in the traditional manner.

GPA's in Table 12.1 are based upon hours taken and credits earned at the university. Standard deviations follow in Table 12.2.

No summary is given for FAMU becayse of errors in the data and none is given for FIU because that school does not report grades in the traditional way.

Total	5184	82.0	18.0	2.57

Table 13 shows the number of transfer students by major (HEGIS program) at each of the universities. Note that for each university there are unclassified cases due to lack of information on these students. In addition to the frequency of students within each major, the table gives the percent whose cumulative GPA is 2.00 or above, the percent whose cumulative GPA is below 2.00, and the Mean GPA for each major. Where no students were indicated as enrolled in a particular major at a university, that major was omitted from the table.
